30 years Together: looking at the past, inspiring the future

Elisa Ferreira
Commissioner for
Cohesion and Reforms

In these challenging times that Europe is facing, I cannot value more what Interreg and cooperation policy have achieved in 30 years. At the heart of the European project, Interreg supports cooperation between regions, by removing obstacles and promoting joint action to bring citizens closer to each other.

The Interreg cooperation programmes and projects cover the entire European continent and the Outermost Regions. They are concrete realisations of Cohesion Policy. Since 1990, Interreg has enabled joint actions and policy exchanges between national, regional and local actors from the EU Member States and their neighbours.

By celebrating the 30 years of Interreg, we all have the chance to take stock of the achievements, but more importantly, we can all play our part in shaping the future of our policy.

I am deeply convinced that the three highlights of this campaign are meaningful for the European project as a whole. By demonstrating that we all have a neighbour, Interreg reminds us that we are all interdependent and that our prosperity and well-being has to be achieved collectively. Cross border and transnational cooperation is key not only within the EU but it also strengthens links and resilience of our neighbouring countries, from the Eastern flank to the southern rim.

Furthermore, Interreg ensures the involvement of citizens and young people in building our continent. Not only does cooperation policy need the voice of civil society to shape the future, but Interreg will also continue to support projects that will enable the next generation to live in a continent full of opportunities, by promoting employment, university exchanges, and equal access to quality services along borders.

Finally, territorial cooperation is crucial to tackle the challenges that know no borders. From the fight against climate change to preventing and addressing public health emergencies, territorial cooperation can offer practical solutions to global and every day's problems, notably in neighbouring regions.

Interreg is a European flagship programme that reinforces the capacity of regional policy to deliver on common public goods, such as sustainable energy, protecting biodiversity and natural heritage on land and in maritime areas or enhance healthcare cooperation across borders.

Interreg is also about leaving no one behind and consolidating the European integration. This is our mission, continually renewed. So let's use this anniversary to question and re-think Interreg. Let's give a new impetus to this fundamental value in the European Union: the spirit of cooperation, driven by the firm belief that we are stronger together.

We are proud to have led this work in cooperation with all programmes and project beneficiaries, and we wish you to enjoy discovering these project stories, about how TOGETHER, concrete solutions are found.

"30 years Together" is the motto of this campaign, it looks at the past but I am convinced that it will inspire all of us when looking towards the next 30 years to come and beyond.

Introduction

All along 2020, DG REGIO will celebrate 30 years of Interreg and cooperation in all its shapes. As the second pillar of the Cohesion policy, European Territorial Cooperation is at the heart of the European spirit because it encourages regions and countries to tackle challenges they can solve only by working together.

The celebrations throughout 2020 will provide the opportunity to demonstrate the achievements so far, but also the chance to focus on the future by launching the debate on cooperation policy post 2020 as we are entering a crucial phase to shape the future of the programming period.

While it is the time to think about Interreg funding covering cross-border (Interreg A), transnational (Interreg B) and interregional (Interreg C) cooperation, it is also the moment to go beyond funding and to use existing mechanisms in order to anchor cooperation in a more sustainable policy environment, such as the Macro Regional Strategies (MRS) or the Border Focal Point (BFP).

It is time to question, to re-think, and to give a new breath to what **we consider as a fundamental value in the European Union: cooperating between people, regions, and countries close to us.**

At a time when the European Union is facing a lot of changes, when political dialogue often questions its functioning, when new European leaders and new priorities are emerging, **Interreg has been acting now for 30 years to leave no one behind and to build Europe brick-by-brick.**

Interreg is already tackling climate change and contributes to a greener Europe, Interreg encourages young people to find their way to work or study abroad and supports initiatives to learn their neighbours' language or to volunteer in projects,

Interreg facilitates everyone to commute from a country to another, to find jobs in the border regions of Europe or outside the EU, or to access the closest public services to their homes.

We want to celebrate the past and we want to do more together in the future.

Interreg

A key philosophical question in the life of every person or organisation consists of defining who we are, why we exist, and what we intend to achieve within our lifetime.

The following stories of Interreg aim to show off what we do, why and for who. Through marking our 30th anniversary, we hope to inspire everyone within the Interreg community for many more years to come.

Now more than ever, the social nature of people and those who work and act “together” remind us that our work is priceless. And that even when times are hard, even in the face of paperwork, illness, social conflicts or daily struggles, it is all worth it.

This is a simple introduction to our world of dreams, hopes and beliefs. We invite you to read it, share it and enjoy it. This exhibition and its accompanying e-book bring to life the “stories of people working, acting and cooperating... TOGETHER FOR ALL OF US.”

The EU has made it possible for people and resources to travel freely within its boundaries, but it has not erased borders, nor eliminated cultural, religious and linguistic identities.

Borders may have been made invisible, but they still impact the lives of millions of citizens.

Like a gardener carefully watering their plants, the EU Cohesion Policy is dedicated to growing the seeds of cohesion and solidarity among EU countries.

Interreg is one of the instruments created to bring this vision of a united Europe to life – like a magnificent tree in the garden of peace.

We are but one tree in the forest of all EU programmes and funds that work tirelessly towards improving the lives of EU citizens.

We are part of a rich ecosystem where everything is connected in an endless cycle. Rooted in the very soil of every nation and region, the Interreg tree expands its branches into hundreds of programmes.

Each branch gives life to thousands of projects, like flowers destined to blossom – planting the seeds of a greener tomorrow.

We are helped in our mission by a myriad of local partners who – like bees carrying pollen – allow us to grow stronger and expand our reach further.

This is us. The Interreg community. We bring together professionals, public officials, academics and Interreg employees. We are united by the deep belief that no border should ever prevent the exchange of resources, ideas and knowledge. We work together across and beyond borders, to find common solutions to shared problems.

We find richness in our differences and opportunity in our challenges. We believe in sharing ideas and know-how, in learning from each other rather than reinventing the wheel, in order to grow together as people, as regions, and as the Interreg community.

OUR VALUES:

Together is better.

At Interreg, we value cooperation above all. That means working together as equals, regardless of borders. It means understanding that together we are greater than the sum of our parts.

We see cooperation as a means towards sustainable problem-solving; working together to achieve long-term benefits rather than short-sighted gains.

We value people who respect each other, regardless of differences, who include rather than exclude, and who ultimately put the wellbeing of the many before the interests of the few.

OUR ROLE:

Find and implement common solutions to shared problems.

Environmental, technological and social matters do not stop at geopolitical frontiers. This often creates shared challenges that affect citizens on all sides.

Whenever the safety, prosperity or freedom of an EU citizen is at stake, we will be there to find and implement common solutions to shared problems, one project at a time.

OUR VISION:

A European Union where people naturally cooperate across borders.

We envision a European Union in which all people will naturally work together regardless of physical, cultural or legal borders, to find long-term solutions, helping each other grow and prosper. Although our responsibility is towards EU citizens, it is a dream for everyone within the Interreg community to inspire people around the world to cooperate and overcome their differences to build together a world where borders become a little more "invisible".

We strive to improve life in the EU through cooperation across and beyond borders, one project at a time, just as we have for the last 30 years. Today we continue, for our future and for the future generations of Europeans.

Topics of the Interreg 30 years celebrations

The celebrations of Interreg's 30th anniversary will focus on three main topics which will be articulated on different occasions. These topics are interconnected in nature and can be demonstrated throughout all of the work we do all cooperation activities.

We believe that they represent the heart of what Interreg is about and illustrate the main concerns expressed by our citizens.

WE ALL HAVE A NEIGHBOUR

We all have neighbours – and they matter!

In good times and bad times, we cooperate, we work together and make decisions together. We face challenges together and we create new opportunities for a better future in a common space. No matter what, we stay together!

Never before has cooperation been so crucial, because never before have our challenges been so global.

Forest fires know no borders. They spread from slopes to valleys, never asking for a visa to cross a border. And neither do diseases, pollution or social unrest. If one side of the border is affected, the other will inevitably be too. Climate change epitomises this perfectly.

But we know that sharing borders involves more than finding solutions to common problems. It also means taking advantage of common opportunities, interests, lifestyles and cultural practices. Together, we create strong communities and build bridges between people across borders. Together, we make sure our citizens have better access to education, health care or jobs. Together, we improve connectivity and accessibility across borders, while preserving everyone's safety and protecting heritage and nature. We have a lot more in common with our neighbours than we might think. And Europe keeps us together.

For 30 years now, under Interreg, EU cooperation programmes have been helping neighbours work together to develop strong communities along internal and external borders. For 30 years, thousands of EU-funded projects have brought concrete benefits to EU border regions and beyond; building trust and respect amongst people from communities sharing a common space. Because all together as neighbours, we know that cooperation matters! As we know that neighbours matter!

[Click on the image to watch the Neighbour video](#)

YOUTH

Young people between 15 and 29-years-old made up 17% of the European Union population in 2018.

Irrespective of their gender, economic situation, social origin and age, they all face common challenges such as weak labour markets and lack of education and training opportunities.

They are not immune from other crises such as global warming, insecurity and the widespread lack of trust in public institutions. However, their desire for a better future is shared across the continent. Therefore, the European Union as a whole offers vast opportunities, especially to the increasing numbers of young people moving within the EU– and enabling youth mobility is crucial to strengthening its position as a knowledge-based economy.

For 30 years, Interreg and cohesion policy have found solutions for young people. How? By working together, building partnerships and sharing knowledge to improve educational levels, qualifications, skills, international competences and job opportunities for all and to make “an economy that works for people”.

Interreg facilitates youth mobility through cross-border internships, enhancing the ability of young people to work and

learn on both sides of the border, increasing their employability and fighting against youth unemployment. Youth mobility is a prime mechanism for fostering a sense of European identity and citizenship.

Interreg promotes networks and activities for helping young entrepreneurs to develop their skills, therefore unlocking youth's unexploited potential and competences. This also creates an enabling environment to make their innovative ideas become ventures with high social added value. Interreg also educates young people in and outside of Europe to make them aware of global warming and to adapt their habits towards a more sustainable way of life.

Interreg builds trust and confidence across borders by establishing common public services that young generations can easily access.

Young generations are the future of cooperation – and Interreg empowers the European spirit.

[Click on the image to watch the Youth video](#)

GREEN AND CLIMATE NEUTRAL EUROPE

Humans have created borders to establish a sense of belonging and common identity throughout the years.

However, Mother Nature does not play by these rules. Borders do not limit rivers, mountains, forests or lakes, nor do they prevent flora and fauna from crossing them. Air, water, land pollution and the use of common resources do not recognise national boundaries. To preserve this treasure for generations to come, Interreg has fostered cooperation in environmental matters for 30 years.

The European Commission has just presented its Green Deal as Europe's new growth strategy with the objective of becoming climate neutral by 2050 and decoupling economic growth from resource use. This will be Europe's 'man on the moon' moment in our fight against climate change and to protect the environment against the biggest threat to humanity in the 21st century.

And one thing is crystal clear: a green and climate neutral Europe cannot be achieved if we all work in isolation, but instead in cooperation. That is what Interreg stands for, and has stood for for the past 30 years.

Multimedia actions

This is Europe New podcast

Stories of collaboration and cooperation from across the European Union, brought to you by the Interreg community. In this podcast series, broadcaster Shahidha Bari talks to the Europeans whose lives have been transformed by Interreg. Celebrating its 30th anniversary in 2020, Interreg was created in the spirit of knowledge-sharing and collaborative thinking, both within the EU and beyond, to help create a peaceful and prosperous union.

Across the series you'll hear how the Interreg community works with everyone from fisherman to farmers, and city planners to entrepreneurs, forging stronger bonds across borders, tackling pressing issues such as climate change and investing in young Europeans.

Tune in and join us on our journey across this great continent.

Videos

New releases

Interreg has released four new videos on the occasion of its 30th anniversary. The videos explain in a simple and enjoyable way the topics.

How to read this e-book

This publication allows you to better understand the diversity of projects carried out under the Interreg umbrella. The projects shown have been classified according to the three themes explained before. In addition, the following pages offer thematic, geographic indexes, as well as per programme strand, so that the reader can locate the different projects according to their own interests. In the illustration on the left you can see the type of information displayed for each project and how it is structured.

SAPOLL

"Isolated actions across the border are unlikely to save pollinators – instead we must act together and mobilise as many people as possible in order to save essential wildlife."

DESCRIPTION
Wild pollinators like bees, hoverflies and butterflies are essential for maintaining ecosystems across the world. But closer to home, in the France-Wallonia-Flanders cross-border area, partners are pulling together to save these threatened species and warn what might happen without our precious pollinators. So far, SAPOLL, which stands for Save Our Pollinators, has led more than 150 awareness-raising actions, reaching more than 35,000 people. Over 500 families have registered their gardens within a network of pollinator protection refuges, over 500 people have attended pollinator courses and three new working groups have brought together naturalists. This incredibly exciting mobilisation also led to the creation of a valuable database, containing more than 850,000 pieces of data about pollinators across the region.

GEOGRAPHICAL COVERAGE

Project map

All over the last 30 years thousands of beneficiaries and citizens have been involved in cooperation actions, benefitting from common solution to shared problems with their neighbours. The whole continent and bordering countries have been able to experience cooperation at its best.

This map wants to ideally display how, through cooperation among regions and citizens, the projects of this e-book are tackling the three topics of the

Interreg 30 years campaign all over Europe. Thanks to these actions, Europe could be greener, closer and looks forward to its future and the one of young generations.

Cooperation, now more than ever allows its regions and citizens to share common values and traditions. Cooperation has both tangible and intangible aspects that altogether identify the uniqueness of the continent and people.

Project figures

This infographic shows all the interlinks and impactful results achieved by a sample of projects displayed in this e-book. Let's imagine now a bright next future, made of more cooperation and joint efforts, could look like. Browse through the figures displayed in this infographic and discover how these projects have made these achievements and impacts possible!

Concepts' map

These concepts represent the thematic diversity of projects shown in this e-book. By clicking on each concept you'll be redirected to the project related to it. The concepts are based on the main idea each project is focussing on.

ZEWSGES

“Litter picking parties and educational campaigns have mobilised communities and NGOs to reduce the levels of plastics and debris on coastlines and the bed of the Black Sea.”

DESCRIPTION

Marine litter, one of the ocean's biggest polluters, sees no borders. Each year 6.4million tonnes of discarded plastic threatens the world's marine ecosystems, but four countries bordering the Black Sea – Ukraine, Bulgaria, Georgia and Turkey – have acted to tackle this common enemy together.

With the help of 1,600 local people along with 330 fishermen, 4,500 students and teachers and 50 NGOs, the ENI CBC Black Sea Basin Programme 2014-2020 has orchestrated ambitious 'Fishing For Litter' clean-up campaigns of coastlines and seabeds, and educational programmes.

It has empowered a generation of children to see that collaboration is fruitful – and helps us to protect our precious marine environments.

“Cooperation in the CleanAtlantic project is special because everyone, from children to researchers and decision makers, has a role to play in the Atlantic coast.”

CleanAtlantic

DESCRIPTION

What do cotton buds, foam food containers and plastic shopping bags have in common?

They're all typical forms of ocean litter – just ask any of the 300 school students from participating regions that conducted marine litter surveys for the CleanAtlantic project, which is working to prevent, monitor and reduce marine debris.

The project connects fishing communities and students in Spain, Portugal, France, Ireland and the UK, and they've already shown great enthusiasm which will be crucial for changing behaviour – and levels of ocean litter.

The ongoing work includes building online databases and interactive maps to capitalize on the existent data and knowledge, developing tools to predict the movement of marine litter, running experiments to ascertain its environmental impact and trialling innovative technologies such as drones as a way of monitoring ocean pollutants.

“This cooperation project united civil society organisations and public institutions through one common passion: a love of nature and of the Mura, Drava, and the Danube river regions.”

DESCRIPTION

The space where the Mura, Drava and Danube rivers converge has become known as the ‘Amazon of Europe’, thanks to the incredible biodiversity and rare species found around this 700km long free-flowing river corridor. To protect the area’s incredible wildlife and habitats, some of which are under threat, Austria, Slovenia, Croatia, Hungary and Serbia have tackled the management of the river and protected areas together.

Through the coopMDD project an ambitious cross-border action plan was developed, while a network of RIVER'SCOOL outdoor classrooms brought children, adults and families to learn about the rivers at the water’s edge. The project made great strides, contributing towards UNESCO’s decision to establish the Mura-Drava-Danube Biosphere Reserve, the world’s first such reserve, spread across five countries.

PESCAR

“Warning systems were created, enabling agricultural professionals to offer timely advice to farmers about the right amount and types of pesticides to be used.”

DESCRIPTION

With the increasing use of pesticides in Croatia and Bosnia and Herzegovina's cross-border area, the PESCAR project worked with farmers to reduce use and stop the contamination of local environments. Limiting the use of pesticides can be tricky without proper data to target usage – and with climate change affecting production, this becomes even more difficult. In response, PESCAR set up a pest and disease warning and forecasting system using information gathered from 57 new visual pest stations and 20 new meteorological machines. A database of 175 agricultural producers was also created, through which recommendations for pesticide use was shared, based on weather conditions and the development of diseases and pests. The network created through this sustainable plan is now used on a daily basis by farmers and agricultural professionals.

BIOVAL: upcycling of breweries' waste

“How can the waste material produced through beer manufacturing be used to create something new, thoughtful and exciting?”

DESCRIPTION

Next time you sip a Belgian or German beer, you may (or may not) wish to consider this: the brewing industry produces a lot of organic waste. In fact, 90% of it must be destroyed at a high cost. Luckily, the BIOVAL project is partnering breweries and universities across the Grande Région – which includes big beer-producing areas in Belgium, Germany, Luxembourg and France – to develop an innovative recycling solution for all of that waste. By turning by-product into new items like biodegradable cutlery or even producing new products like flour and vinegar, the industry is being encouraged to embrace the circular economy.

INNSieme

“Through cooperation, Austria, Germany and Switzerland are coming together to overcome the ecological challenges faced by the Inn River catchment area.”

DESCRIPTION

Just like most rivers in Europe, large sections of the Inn river, which flows through Switzerland, Austria and Bavaria, Germany, are in poor ecological condition. Until now, these separate countries have worked individually on parts of the river within their own boundaries, with little linking up with other regions.

The INNSieme project was set up for the regions to work more efficiently and intelligently to manage nature protection and water management with tourism, agriculture and sports – and sectors with a relationship to the river.

The INNSieme project, which is still in its early phases, will for the first time bring bird watchers, fishermen, beaver stewards and water engineers together to the table to discuss solutions for the problems they are all dealing with, working at the heart of this river.

“Joint neighbourly involvement in improving the condition of the Beskid forest has made a real difference.”

DESCRIPTION

Fir and beech trees once dominated the Beskid forest, which covers the lower parts of the Beskid mountains across Poland and Slovakia. An important part of this project was restoring the depleted forest – and already 11million new trees have been planted across 1,900 hectares. The aim was to improve the condition of this beautiful natural environment and the quality of life for the people living locally.

The cross-border Beskid Green Path, which extends for 32km, was also created – making way for resting stops for walkers and visitors and educational information boards that share the significance and importance of this natural landscape. Thanks to the work, the next generations will already see a completely different forest in this region.

SUPER-LNG

“It has been a very interesting experience working with universities, institutions, and companies from various EU Member States. Despite working in similar areas, the experts all have different approaches to the issue – creating a rich diversity of perspective.”

Interreg's new podcast

<https://www.adrioninterreg.eu>

www.superlng.adrioninterreg.eu

DESCRIPTION

Ports across the Adriatic-Ionian seas area are aiming to reduce the carbon footprint associated with shipping, as part of the SUPER-LNG project, which is working to increase the environmental sustainability of maritime transport.

Ports can reduce their CO2 levels through the safe use of liquefied natural gas, a cleaner-burning fuel derived from natural materials like plankton and algae.

A network of experts across academia and industry has come together to share their extensive knowledge to ensure best practice, harmonised standards and professional training about the use of LNG across the ports.

GEOGRAPHICAL COVERAGE

Attica (Greece), Region of Western Greece, Region of Western Slovenia, Emilia-Romagna (Italy), Apulia (Italy) and Italy (National representation).

ADAPTaRES

“In Cape Verde, we want to treat and reuse water like they do in the Canary Islands – with quality and without risks. ADAPTaRES allows us to work together and learn how to achieve this.”

Regla Hernández, project partner, Cape Verde

DESCRIPTION

Climate change is having a serious impact on water availability across the world – and the North Atlantic archipelagos Macaronesia is just one region already living with the reality of droughts and water shortages. The ADAPTaRES project is helping farming communities and the general population in Madeira, the Canary Islands and Cape Verde adapt to climate change through more responsible water use with awareness campaigns designed to change behaviours. Comics, online games, courses and workshops at schools were organised, while an app has been created to improve communication between farmers using irrigation and water management bodies.

GEOGRAPHICAL COVERAGE

Canary Islands (Spain), Autonomous Region of Madeira (Portugal) and Cape Verde.

“ECOMARPORT provides the right framework in which public and private sectors work in partnership to develop technological solutions that meet the needs of the marine and maritime sector. It provides useful information, products and protocols equally across the area of interest that in this case affects the whole Macaronesia region.”

Carlos Barrera, Project Coordinator, Spain

ECOMARPORT

DESCRIPTION

Madeira, the Azores, the Canary Islands and Cape Verde may all be part of the Macaronesia oceanic archipelagos, but they are located remarkably far from each other. The islands are narrowing this physical distance with the collaborative ECOMARPORT project, which promotes marine and maritime R&D and innovation across regional ports, and monitors the quality of local marine environments. So far, a port flood forecasting and warning system has been created; real-time data visualisation has been made accessible free of charge; and sensors and data formats of observational platforms like buoys, ocean gliders and weather stations have been standardised. The project has also joined the Macaronesia Marine Observation Network, also known as the R3M Network – demonstrating that good things come from having more hands on deck.

GEOGRAPHICAL COVERAGE

Canary Islands (Spain), Madeira (Portugal), Azores (Portugal) and Cape Verde.

ReNovRisk-Cyclones

“The organisation of the ReNovRisk-Cyclones experimental campaign in Maputo, Mozambique, has been a huge opportunity for our agents, who had never had the chance to carry out atmospheric radiosonde observations before.”

Francisco Nostado, project partner

DESCRIPTION

With climate change warming our oceans, researchers expect the number of intense tropical cyclones, like the 2016 Cyclone Fantala, to increase. As such, the ReNovRisk-Cyclones project was formed to assess the impact of climate change on cyclones – in order to improve existing cyclone forecasting and observation tools in the South-West Indian Ocean.

Led by the University of Réunion in partnership with Meteo France, the French National Centre for Scientific Research (CNRS) and meteorological and university institutions in Madagascar, Seychelles, Mauritius and Mozambique, the project is developing models to estimate the impact of cyclones on rainfall, wind and sea swell and has carried out unique climate simulations in the South-West Indian Ocean basin. These will be used to sharpen our understanding of how cyclones and their effects might change in the future. The project has also made possible the training of staff, students and a new generation of researchers in the fields of climatology, cyclone forecasting and experimental meteorology.

STEU

“Supplying water and treating waste water are critical problems for both parts of Saint Martin. The goal here is to support the development of a common approach in the general interest of the population of both sides”.

Daniel Gibbs, President of the Collectivity of Saint Martin

DESCRIPTION

The island of Saint Martin is notoriously dry and relies on extracting drinking water from the sea. This ambitious project, a cooperation between the north and south sides of the island, aims to create one shared wastewater treatment plant for the whole of Saint Martin by pooling existing resources. Following the European Directive on Urban Waste Water Treatment, this project will improve the capacity of treatment stations and reduce the discharge of wastewater into natural environments – until now untreated water was directed into the Cole Bay lagoon. A new wastewater collection system is a positive step in the right direction towards protecting the environment and making public water supplies as resilient as possible.

Kaliningrad and Klaipeda Maritime

“The unique lighthouse boat Irbenskiy, and fishing trawler Dubingiai SRT-3216 will be restored as part of this project between two regions that share a long, rich history of shipbuilding and navigation.”

DESCRIPTION

The Curonian Spit, a slim 98-km long sandspit is the border between the Baltic Sea and Europe's largest lagoon. This beautiful UNESCO World Heritage site is also what connects neighbours Klaipeda, Lithuania and Kaliningrad, Russia – two regions that share a long, rich history of shipbuilding and navigation.

To commemorate and sustain this maritime tradition, leading museums, Lithuania Sea Museum and Museum of the World Ocean, are renovating two historic ships.

The project will see new life breathed into the unique lighthouse boat Irbenskiy, and fishing trawler Dubingiai SRT-3216; a mapping of the light signals and 'voices' of Baltic Sea lighthouses; and illuminating holographic films to shine a light on the regions' important common heritage.

Museums over the borders (Stage I and II)

“Both museums in Poland and Russia have been modernised and have new equipment and exhibitions, which has had a significant influence on the increased number of visitors to each institution.”

DESCRIPTION

Two museums in Elblag, Poland and Kaliningrad, Russia have modernised themselves to create a rich, joined-up tourist experience that shares the common history of the two areas.

Through renovation works, a joint education programme, the purchase of innovative holographic technology and increased tourist information in the form of attraction guides, the Friedland Gate Museum, Kaliningrad, and the Museum of Archeology and History, Elblag are bringing stories from across the border to life.

In the next phase of the project, the Centre of European Meetings “Światowid” has joined the partner museums. Together, they plan to collect interviews with the post-war residents of Elblag and Kaliningrad. It will form a unique collection of memories and testimonies from people who had to leave their homes and start the new life in the region after WWII.

“Cooperation in the Alps brings digital infrastructure in place – so that entrepreneurship and social innovation can flourish in rural Alpine communities”

SmartVillages

Interreg's
new
podcast

PLAY NOW

DESCRIPTION

Who said smart cities should have all the fun? Across the Alps, a group of academics, businesses, policy-makers and the civic sector have put their heads together to make rural communities more liveable, innovative and better connected.

Through a smart village approach, SmartVillages is using digitisation to build infrastructure and jobs fit for modern life, tackle carbon emissions, retain younger generations and keep older people connected to their communities. The ambition? To make these Alpine communities across France, Switzerland, Germany, Italy, Austria and Slovenia the forerunners of digitalisation in Europe.

EUROCIDADE 2020

DESCRIPTION

The Galician town of Verín and the Portuguese city of Chaves are connected by more than just the Tâmega river. Just 25 minutes apart, they form the oldest 'Eurocity' on the border, which stands as a success story in cross-border cooperation. The aim is clear: to improve the quality of the lives of citizens and exchange cultural experience.

The sharing of services, creation of initiatives like the "Eurocitizen Card" allows inhabitants of the two neighbourhoods to enjoy discounts for public services, including swimming pools, hot springs, libraries and much more. In addition, the implementation of a free bus across the border connecting the two towns, the creation of a green corridor along the Tâmega river and the branding of Chaves-Verín as a tourist destination has strengthened the region's future through smart, inclusive and sustainable growth.

Certainly, the project has demonstrated that the institutional, economic, social, cultural and territorial integration of two border towns is perfectly doable and comes with major benefits for the communities concerned.

"This cooperation project has reinforced a feeling of camaraderie amongst Spanish and Portuguese citizens and reached into the everyday lives of local people."

Take Care!

“Take Care! awakened a sense of social responsibility needed to create equal living standards for all disadvantaged people – whether in Croatia and Serbia.”

DESCRIPTION

“Last one to leave, please turn off the lights” is a saying heard often in Slavonia, Croatia and Srem, Serbia; two regions facing serious emigration of young people and a growing elderly population.

The Take Care! project responded to the care needs of disadvantaged people in rural areas; many with families that have moved away. Hospitals, NGOs, development agencies and care homes combined service improvements with new economic opportunities to encourage migrating citizens to stay.

As a result, 32 citizens from Croatia-Serbia border regions were employed as nurses, therapists and psychologists, 40 social care employees were given end-of-life care training and 1,000 people in Vukovar-Srijem County, Croatia, and Srem District, Serbia were supported. A new platform connected hospitals, 7 in-home support teams were mobilised and a new palliative ward for patients in Sremska Mitrovica, Serbia, provided much-needed care.

TOURISMED

“142 fishermen and 33 vessels tested a new tourism business model, which shares the Mediterranean’s artisanal fishing heritage with tourists.”

DESCRIPTION

The Mediterranean Sea has lost 34% of its total fish population over the past 50 years and the livelihoods of fishermen in Italy, Cyprus, Greece, Albania, France and Spain are under threat. In response, the TOURISMED project has created an economic alternative to diversify their incomes.

A new tourism offer, designed in collaboration with the fishermen, gives visitors the chance to experience and learn about traditional artisanal fishing. These activities promote sustainable practises and crucially preserve cultural identity without marginalising communities.

The important role of professional fishermen is celebrated, while reassuring fishing communities that their work is valued. Since the project ended, fishermen have continued with their tourism activities – and in doing so, are inspiring tourists to consider the sustainability of these time-tested traditional fishing methods.

In For Care

Interreg's
new
podcast

PLAY NOW

DESCRIPTION

With increasing ageing populations, many European countries face a care crisis. It's estimated that 80% of long-term care in Europe is provided by informal carers, although many of them don't identify as such. This makes informal carers vulnerable to burnout due to the extra burden of care alongside other commitments like work.

With demand for care set to rise, the In For Care project tested a Norwegian tool for coordinating and engaging new people in volunteering within the health and care sectors. Regional campaigns have led to informal care rising on the political agenda in several of the partner countries, and life quality of next of kin carers was found to have improved. Every partner learned a lot about service design and a 'quadruple helix framework' that brings together academia, the private and public sectors, and civil society end-users.

Reconnecting with Sorbian culture

“Connected by our shared language roots and history, this project has helped younger generations in Poland and Saxony to rediscover their common Sorbian heritage.”

DESCRIPTION

This project set out to reconnect young generations in Poland and Saxony to Sorbian culture and identity. The Sorbs represent a Slavic minority living in the region of Lusatia, Eastern Germany, especially in the areas of Bautzen (Budyšin) and Cottbus (Chóšebuz). Many of the 60,000 Sorbs are still attached to their language and traditional culture with folk costumes and rural architecture. In this project, schools and museums worked together with children, young adults and families to exchange knowledge of Poland and Lusatia’s common history, which includes centuries-old similarities in Slavic languages and in culture.

A video guide was created for children for the permanent exhibition at the Sorbian Museum in Bautzen, Germany, in which mythical characters shared stories about Sorbian history, customs and ways of life in Lusatia.

Polish-Sorbian student exchanges and performances of school plays also followed as part of the cultural exchange. People of all ages loved the video game; it was a way of better understanding and feeling more connected to this important joint cultural heritage.

Cross-border day-care centre Strasbourg-Kehl

“Bringing up young children from two different cultures together and enabling them to learn a second language is what cross-border cooperation is all about.”

DESCRIPTION

Every day, 60 young children aged between 10-weeks-old and 3-years-old are dropped off from both sides of the Rhine to a very special cross-border day-care centre. Here, children from Strasbourg, France and Kehl, Germany – which are less than 30 minutes apart – are brought up together in a multicultural environment in which two languages are spoken.

The seven French and seven German staff all speak their mother tongue, and the children learn about each other's cultures.

There can be challenges, such as differing attitudes about the age at which mothers return to work. In France, it's considered normal for them to leave 3-month-old babies in daycare, while in Germany this is more common after one year. Therefore, German educators were shocked to see young French parents leaving their babies all day long. But such obstacles represent a lesson for the children: that overcoming cultural difference through kindness and tolerance is the key to enriching, healthy interactions.

Preserving Our Heritage Together: Bulgaria - Turkey

DESCRIPTION

Two important neighbouring cultural institutions – both badly in need of restoration – teamed up to improve themselves as a new joint tourist destination for cultural and religious tourists, and to create new jobs in the region.

Between the medieval monastery of St Nicholas in Kırklareli, Turkey, and the Aquae Calidae thermal baths in Burgas, Bulgaria, there were important archaeological excavations, restorative works, 3D scanning of artefacts and even the creation of infrastructure like a new road and car park to encourage tourist footfall.

The results? Extensive media coverage, increased local and foreign tourism across both sites, a joint international scientific conference, and in Bulgaria, an influx of visitors coming to see the gloriously restored bath of Suleiman the Magnificent with their own eyes.

GEOGRAPHICAL COVERAGE

PARTNERSHIP

AFRIMAC

“AFRIMAC is a territorial cooperation project which unites people and organisations from various countries with different languages and cultures to create and develop business initiatives through constant communication.”

DESCRIPTION

Helping businesses in the Canary Islands and West Africa to become more competitive on a regional, national and even international stage was at the heart of the AFRIMAC project. Small and medium-sized businesses across the Canary Islands, Madeira, the Azores, Senegal, Mauritania and Cape Verde were supported to implement the necessary conditions for their success. Special attention was paid to improving innovation processes and regular training on cooperation. The AFRIMAC project also saw a two-week exchange between female entrepreneurs from Senegal and Fuerteventura. Organised through the AFRIMAC Tech Woman initiative, it aimed to proactively increase female representation across technological, economic and entrepreneurial activities. Promoting a greater participation of women in decision-making processes was just one of the key areas identified as crucial to the continued competitiveness of the region’s businesses.

OCS - Oyapock, Coopération, Santé

“OCS is undertaking ambitious and necessary work within a territory where measures, actions and strategies in sexual and reproductive health are crucial.”

DESCRIPTION

For the most vulnerable populations in the French Guiana and Brazilian cross-border area, the OCS project (Oyapock Cooperation Health) is providing access to much-needed sexual and reproductive health care. The border area between French Guiana and the Brazilian state of Amapá is an active HIV-transmission zone and over a three-year period from 2017-2020, partners have worked together with the aim of stopping the HIV epidemic and preventing non-desired pregnancies and violence against women within the region. The project has responded to the Oyapock Basin's health and social issues through training and strengthening the skills of health professionals and workers. It has addressed prevention and protection through developing knowledge of sexual and reproductive health amongst inhabitants; and socio-sanitary care by improving the overall care of people with infectious diseases and better integrating them into a society that still stigmatizes HIV.

CARIBSKY

“All stakeholders involved in CARIBSKY share a vision: to provide passengers with access to all Caribbean destinations, in a single ticket.”

DESCRIPTION

For the Caribbean islands of Guadeloupe, Martinique, Dominica, Antigua, Curaçao, Barbados and Saint Martin, the distance between islands can easily isolate communities. But the CARIBSKY project is simplifying inter-Caribbean travel with a brand-new network of interconnected airlines. The aim? To foster free movement of people at lower prices and offer easier access for intercontinental passengers – boosting economic growth across the region. Participating airlines are striving to provide customers with more services in the Caribbean region; with as many connection options as possible to travel between English, French, Dutch and Spanish territories; and to create a network specifically tailored to travellers' needs. A task force was created to harmonise European legal rules within Caribbean territories, and modernise current reservation systems, communications and marketing. The ultimate goal is to create a single ticket to give passengers access to all Caribbean destinations.

EUR.friends

“360 cross-border internships have taken place, matching skilled and motivated young trainees with regional organisations.”

DESCRIPTION

For young people beginning their careers, gaining experience, new skills and boosting self-esteem will get them ahead fast. For businesses suffering from talent shortages, special care and attention to apprentices is especially crucial for future-proofing. It's why the EUR.Friends initiative organised cross-border internships in a bid to counteract a regional 'brain drain' of young talent across the Netherlands, Belgium and Germany. 368 motivated interns undertook traineeships in accountancy, technology, construction and hospitality, with the support of an app designed to help them overcome language and cultural barriers. Some as young as 16 years-old and with only a basic grasp of foreign language threw themselves into the traineeships – proving that the future is bright in the Meuse-Rhine Euroregion.

iEER

“The iEER has achieved a return on investment of more than 1500% of its Interreg Europe and EU funding thanks to cooperation amongst partners.”

DESCRIPTION

What makes or breaks a startup? And what happens when you reject the silo mentality? Those were some of the questions bounced around during the iEER project, which resolved to make European regions more entrepreneurial. Universities, local and regional authorities, entrepreneurship support organisations and small and medium-sized businesses worked together to drive enterprising activity, especially amongst young people. The learning camps, peer reviews and the iEER Boost Growth Handbook fostered the development of ten regional entrepreneurial ecosystems in which young people gain entrepreneurial skills and learn what makes a successful business. Thanks to its strong links to the EU’s small and medium-sized business-related policies, the project showed that regional funding paired with European investment and structural funds can trigger transformation in the regions.

RYE CONNECT

“The change in attitudes in these communities is clear. There is a new level of communication between organisations and young entrepreneurs across Northern Periphery & Arctic regions that was previously non-existent.”

DESCRIPTION

The rural regions of Greenland, Finland and Northern Ireland all share a common challenge: young people are leaving. The RYE Connect project set out to reverse this trend by encouraging younger generations to stay and create their own businesses in their communities. They were given the tools – through face-to-face and online mentoring, workshops, collaboration with universities, and a new startup support system – to see business as a concrete possibility rather than an insurmountable barrier. 36 businesses were created across agriculture, creative arts, transport, digital infrastructure, media, healthcare and beauty and sports, which have given young people a greater chance to make rural communities more liveable for themselves and their peers.

ActiveGirls

“The project gathered positive, cooperative and ambitious people, who were all passionately motivated to get more young women into sport, sharing a new cross-border friendship.”

DESCRIPTION

There's a significant difference between girls and boys in the Hungary-Serbia border region – and that's how much sport they play. The ActiveGirls project sought to tackle the low participation of girls aged 7-15 in physical activity, an issue that's been neglected for years. Two successful cross-border summer camps gave girls the chance to try new sports, strengthen old friendships and make new ones. A new app mapped places for them to play sports, and eight schools, sport clubs and communities were given new equipment. Importantly, the involvement of stakeholders, sports professionals, PE teachers and coaches has pushed discussion about getting more girls into sports up the agenda. An early positive relationship with sports is essential for leading a healthy lifestyle, and this project marked the first steps towards an attitude change.

SMART-UP

“A shared desire and enthusiasm to enhance innovation amongst startups in both Austria and Hungary has created a really dynamic atmosphere.”

DESCRIPTION

In a bid to reverse this trend, the project SMART-UP was launched to create a lively and sustainable community of businesses and startups called Startup Pannonia.

Special attention was given to boosting startups of less than five years-old, as well as young entrepreneurs and entrepreneurs-to-be and students. 20 startups were assessed on their capacity to be innovative, which was then used to create a benchmarking study, and tailored R&D action plans for the businesses.

The project is stimulating ideas, offering tailored mentoring and coaching, and organising feedback from Hungarian and Austrian company executives in a targeted way, creating a framework that can be used again and again to the benefit of the business community.

GHELP

“Thanks to cooperation in South West Europe regions, over 234 people and 27 prospective newborns have been studied as part of this cutting-edge research into hearing loss.”

DESCRIPTION

Around 466million people worldwide have disabling hearing loss (HL) and 34million of them are children. For children, hearing loss affects their ability to develop speech, language and social skills. Most cases of HL in babies are genetic, but there are few genetic tools for effective diagnosis. This is why GHELP was created – to innovate ways of detecting and treating hearing loss. The ultimate goal is to move from treatment to a personalised medicine to combat the problem. The project has already designed and developed a comprehensive genetic panel. Based on the Next Generation Sequencing (NGS) technology, the later allows to study, in a single blood sample, the 180 most relevant genes in deafness, avoiding gene-to-gene study, maximizing the time of diagnosis and leading to an earlier treatment of kids. In addition, the project has organised a pioneering training programme addressed to health professionals to get familiarised with the genetic diagnosis through NGS technology. The first edition was attended by 45 medical professionals from Spain and Portugal, and was just one step towards educating healthcare professionals in this cutting-edge field of work.

Rampen/Ramppi

“The young people involved have taken the step from inactivity towards actively seeking work or education. Through cooperation, they have gained stronger self-confidence and now dare to make themselves heard.”

DESCRIPTION

In the twin cities of Haparanda, Sweden and Tornio, Finland, youth unemployment is at a high level compared to national levels. The Rampen/Ramppi project has worked across the border to improve the youths' professional networks and encourage them to seek employment, education and leisure activities on both sides of the border – in order to gain access to more opportunities.

The project has increased cross-border cooperation between organisations working with young people, and Folk high schools have played a crucial role. The collaboration has paid off – some of the young people involved in the project have applied for education, while others have established contacts with companies and employers and managed to secure jobs.

“By the end of their service volunteers have shown enormous openness towards their host country and made lifelong friendships through cooperation.”

Strong Neighbours – German-Czech Partnerships by means of Voluntary Services

DESCRIPTION

For many people who volunteer the work goes on to positively influence their lives, careers and personal relationships in ways they may never have imagined. The Strong Neighbours project, which has two parts, has established a volunteer service for young people aged 18-26-years-old in Saxony, Germany and Northern Bohemia, Czech Republic. The young people get the opportunity to spend a year abroad volunteering in social institutions including schools, nursery schools and retirement homes. By doing so, they improve their language skills and knowledge of neighbouring regions – while also gaining valuable life experience and a broadening of their perspectives. In the future, the project plans to facilitate neighbour relationships as a means of promoting multilingualism across Germany’s western borders.

GEOGRAPHICAL COVERAGE

Dresden (Germany) and Ústí nad Labem (Czech Republic).

PAREO

“Most of the messages we get are that the planet is doing badly, that there is not much more to do. Through entertaining games, I now know that there are solutions to protect the coral reefs, and that I can even implement them at my level.”

A little girl from Mauritius

DESCRIPTION

Reunion, Mauritius and Seychelles share an exceptional coral reef ecosystem, but it is being damaged. The PAREO project aims to enhance the protection of the reef, which is the source of many opportunities for local fisheries and the development of leisure and tourism. This innovative environmental and educational project combines knowledge sharing in a fun way using a teaching toolbox on coral reefs developed by scientists. New technologies to view reefs and conservation actions are also part of the project. Younger generations have been empowered to help take control of the future, with awareness campaigns reaching 100 classes from Reunion, Mauritius and Seychelles. They learned about the protection of coral reefs through artistic performance and virtual dives, emphasising that the future of the Indian Ocean’s reef heritage is in their hands.

Peace Bytes

“Peace Bytes is transforming the lives of marginalised young people across Northern Ireland and the cross-border region on a daily basis.”

DESCRIPTION

Marginalised young people living in deprived areas of Northern Ireland can be vulnerable to being influenced by paramilitaries and radical issues around religious identity. In response, the Peace Bytes programme worked with young people aged 14-24-years-old to help them to become leaders and advocates for peace in and between local communities in Antrim and Newtownabbey, Derry/Londonderry and East Inishowen in Donegal. Through cultural exchange across communities, young people can earn qualifications and are supported by dedicated youth workers who encourage them to participate more actively within society. The programme provides a safe place for young people to explore their own identities, challenge discrimination and explore diverse cultural identities, while building mutual respect underpinned by acceptance.

ELAN

Encourage and promote school exchanges and student and professional mobility throughout the Caribbean

DESCRIPTION

Strengthening the skills of young people in the Caribbean to improve their access to the labour market is just one of the objectives of the ELAN project, which stands for Linguistic Exchanges and Innovative Learning through Mobility. The project underlines the importance of promoting a shared Caribbean identity, which is a key element in building efficient and sustainable regional integration. Improving foreign language skills, increasing access to higher education and training, facilitating internships and school exchange programmes, supporting school partnerships, teacher mobility and linguistic and cultural exchanges are all part of this important partnership. It is also in line with the 2013 Overseas Association Decision between the EU and overseas countries and territories.

GEOGRAPHICAL COVERAGE

Martinique (France), Guadeloupe (France), Anguilla, Antigua and Barbuda, the British Virgin Islands, Dominica, Grenada, Montserrat, St. Kitts and Nevis, St. Lucia and St. Vincent and the Grenadines (Organization of Eastern Caribbean States), Barbados, Trinidad & Tobago, Jamaica and Haiti.

"I found myself in a stimulating environment, conducive to all forms of learning. This was an experience I will always remember for the knowledge I gained and the people I met there."

*Clotilde Laval, student, Martinique
(Exchange programme in Barbados)*

Formaterra

“Our students gain technical skills and open up to other cultures. This experience is a valuable addition on a CV and allows students to be more confident when an opportunity for studying abroad arises”.

Didier Ramay, Professor of Agronomy, Réunion

DESCRIPTION

Getting more young people into agricultural training is at the heart of the Formaterra project, run in partnership with REAP AAOI – the Network of Agricultural Establishments in Southern Africa and the Indian Ocean. The aim? To improve professional qualifications, skills and knowledge, as well as autonomy and openness to others. The project also aims to improve English language skills amongst students across Reunion, Madagascar, Comoros and Mauritius. The network encourages the open exchange of ideas and practices within the field of agricultural training. The hope is that by the end of the project, young people are more confident and better equipped to throw themselves into regional agricultural projects suited to their new skills.

Au Fil des Îles

Regional School of Fashion Industry

“Cooperation is built in an intelligent and intercultural way.”

DESCRIPTION

Mayotte, the French department that lies between Madagascar and Mozambique, is facing an important increase in the youth unemployment. One of the reasons for that is the ignorance of the regional employment market including one in particular: The Fashion Industry. Therefore, the Au Fil des Îles - École Régionale des Métiers de la Mode - project set out to answer the need of textile-fashion technicians in the regional industry and to create job opportunities for those unemployed youth. The aim was to make Mayotte a shared professional training space for the wider East Africa region's textiles and fashion industries – with neighbouring Madagascar and the Union of the Comoros also a part of the project. Local young people, small and medium-sized businesses, and the entrepreneurial sector were supported through training, employment and social integration with industry partners in East Africa.
